Techincal Competencies

- HTML
- CSS
- JavaScript
- MySQL
- Advanced Java

Projects

Online Secure Auction System

Description: An online platform for secure auctions where sellers can auction items and buyers can place bids.
Used: HTML, CSS, PHP, MySQL
Github: Online-Secure-Auction-System
Responsibilities:
·Designed and implemented the user interface for a seamless auction experience.
·Integrated security measures like password hashing, multi-factor authentication etc.
·Developed backend logic to manage auction timings and bid updates.

Weather forecasting application

Description: Developed a weather forecasting application that provides real-time weather updates for a specified location.
Used: HTML, CSS, JavaScript, OpenWeatherMap API
Github: weather-app
Responsibilities:
·Integrated OpenWeatherMap API to fetch weather data based on user input.
·Implemented client-side JavaScript logic to process and display weather data.

Professional Training

Google Cloud Training

Objective: Master cloud services through Google's Qwiklabs.
Description: Gained proficiency in cloud services and integration with AI, Big Data, and other technologies.
Used: Google Qwiklabs
Key Takeaways:
·Learned to deploy applications on Google Cloud.
·Explored integration of cloud services with AI and Big Data solutions.
Developed skills in managing cloud resources and optimizing performance.
